

Pg	Year	Life Cycles			
		You should know/understand:			
		There are different stages in the lives of all living things			
		The different stages link together to form a life cycle			
		That a seed contains a tiny plant and a food store			
		Under the right/ideal conditions, a seed will germinate			
		That a mature plant produces flowers			
		That flowers are pollinated by insects and the wind			
		<b>That fertilisation follows pollination</b>			
		That seeds and fruits form after fertilisation			
		That seeds are dispersed to reduce competition between plants of the same species			
		Different ways in which seeds are dispersed			
		Some plants may have a short life cycle in which they produce a large number of seeds			
		Some plants have very long life cycles			
		Plants have ways of ensuring their seeds survive
